A prespecified spatial diagnostic reveals a signal that total native error does not establish
No ground-truth alignment is applied to predictions; all 12 used places and all 3 seeds retained
Soft-dynamic: total error history gain
Prefix
Corrective
−0.015
−0.010
−0.005
0.000
0.005
0.010
Error reduction; positive favors candidate
Soft-dynamic: spatial history gain
Prefix
Corrective
0.000
0.001
0.002
0.003
0.004
Error reduction; positive favors candidate
Total = spatial variance + squared mean bias
Spatial component
Mean-bias component
Total
History minus Recent error (negative better)
0.005
0.004
0.003
0.002
0.001
0.000
−0.001
−0.002
